

Amendments to the Specification:

The examiner has objected to the abstract as being too short and not sufficiently descriptive.

In response to this objection, the applicant submits the following abstract as a replacement for any previously submitted abstract.

Embodiments of the present invention comprise methods and systems for transmitting digital images. These embodiments may comprise transmitting one or more portions of an image and transmitting a customized image based on selections related to the portions. Some embodiments comprise parsing an image file to determine which portions need to be transmitted for a particular image customization selection.
